ATTRITION COUNT

237

ATTRITION RATE

16.1%

RETENTION RATE

83.9%

KEY FINDINGS

- Research & Development employs 65.4% of the workforce and accounts for 56.1% of all attrition.
- Laboratory Technicians record the highest employee attrition (62), followed by Sales Executives (57).
- 53.6% of attrition occurs among employees working overtime, indicating workload may influence employee turnover.
- Employees who travel rarely account for the highest number of attrition cases (156), reflecting the largest travel segment.
- The organization maintains a strong retention rate (83.9%); however, attrition remains concentrated in specific business areas.

Recommendations

- Prioritize retention initiatives within the Research & Development department.
- Review compensation, career growth, and workload for Laboratory Technicians, Sales Executives, and Research Scientists.
- Reduce excessive overtime through improved workforce planning and workload balancing.
- Monitor employee engagement across business travel categories to identify potential retention risks.
- Establish quarterly HR reviews and predictive attrition monitoring for high-risk employee groups.

Risk Matrix

Area	Risk Level	Reason
Laboratory Technician	High	Highest Job-Role attrition (62)
Research & Development	High	Highest Attrition(133)
Human Resources	Low	Lower Attrition(12)
Overtime Employees	Medium	53.6% of attrition occurs in overtime
Sales Executive	Medium	Second Highest Job-Role Attrition(57)

Business Impact

- Reducing attrition in Research & Development can improve workforce stability in the organization's largest department.
- Lower overtime dependency may improve employee satisfaction and reduce voluntary turnover.
- Targeted retention strategies for Laboratory Technicians and Sales Executives can reduce recruitment and onboarding costs.
- Quarterly monitoring of attrition trends enables proactive HR decision-making and supports long-term workforce planning.
- Data-driven interventions can strengthen employee engagement and improve overall organizational performance.
